No - but what an annoying task!

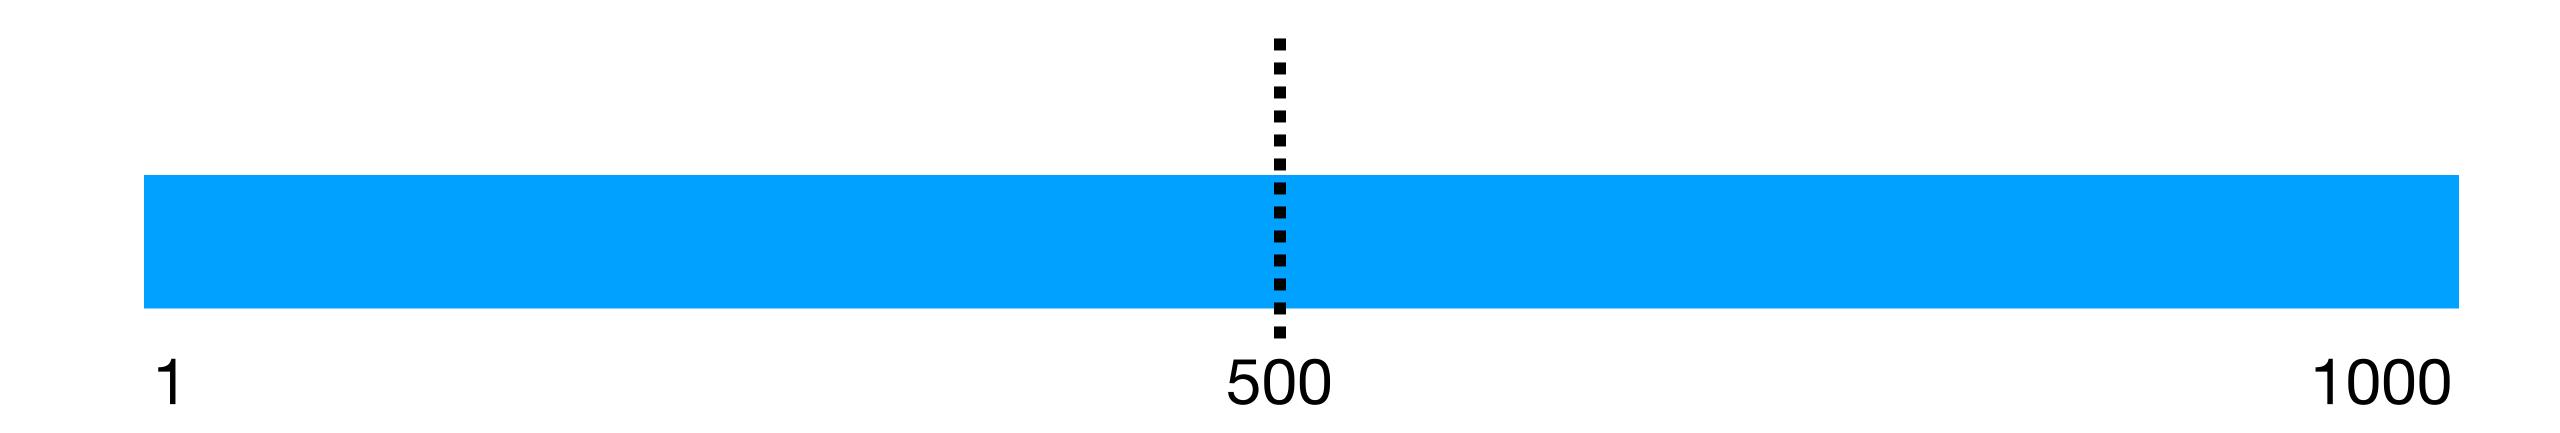

The Guessing Game

1 volunteer

The Guessing Game

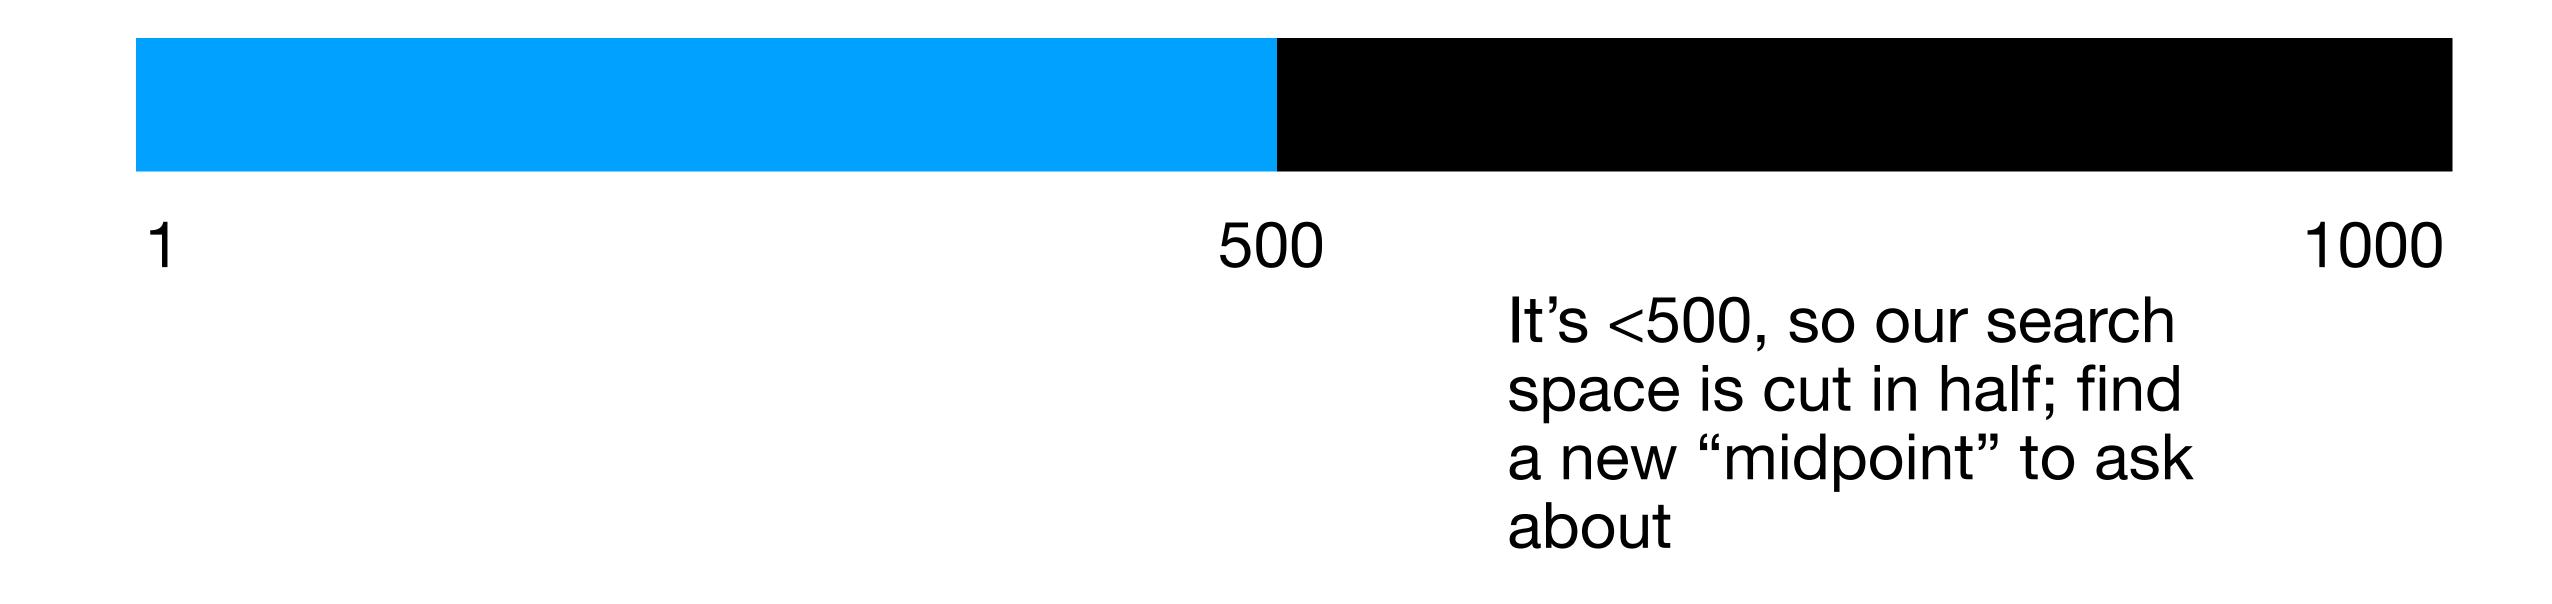

- * think of a number from 1 to 1000
- * write it on the blackboard
- * we will ask you questions to guess your number * how many questions do you think we will need?

...with each question; this strategy is called "binary search algorithm"

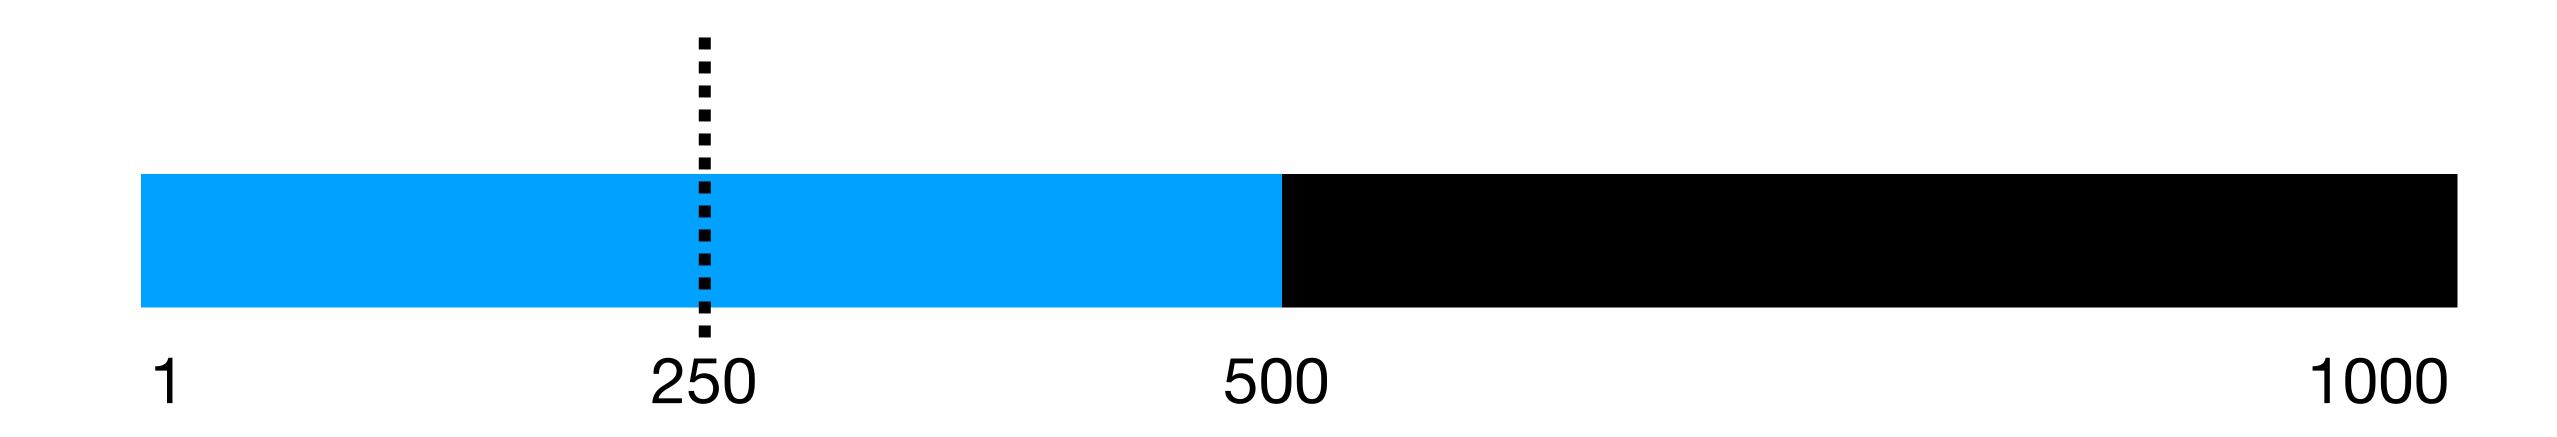

Q1: Is it 500; higher; or lower?

...with each question; this strategy is called "binary search algorithm"

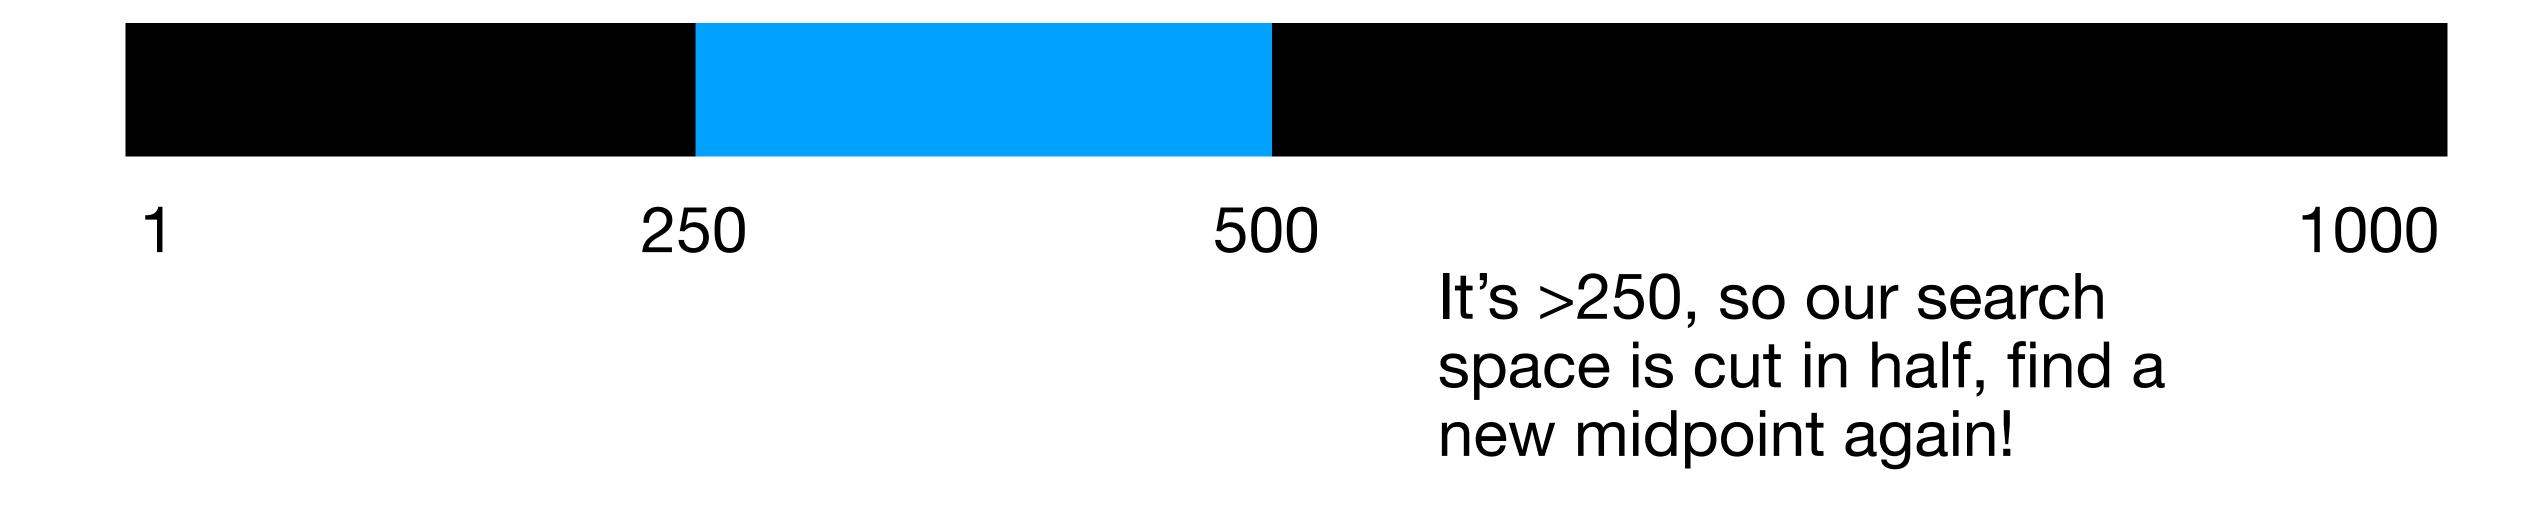

...with each question; this strategy is called "binary search algorithm"

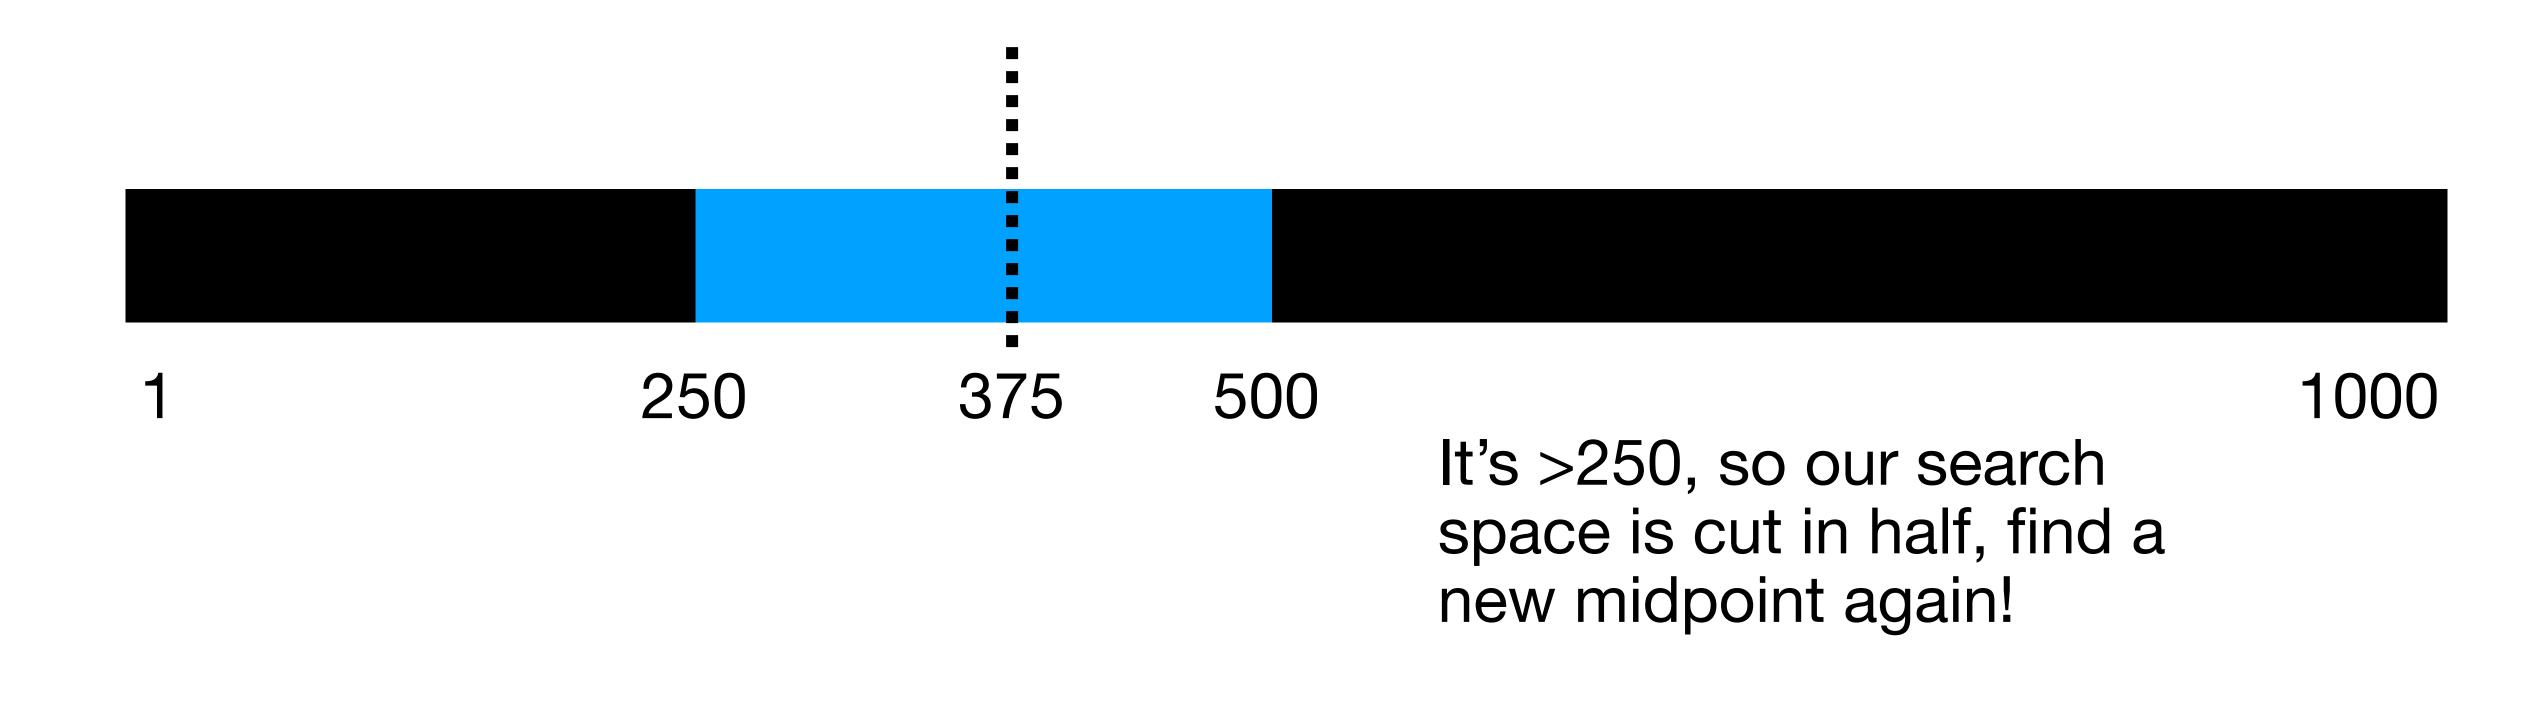

Is it 250; higher; or lower?

...with each question; this strategy is called "binary search algorithm"

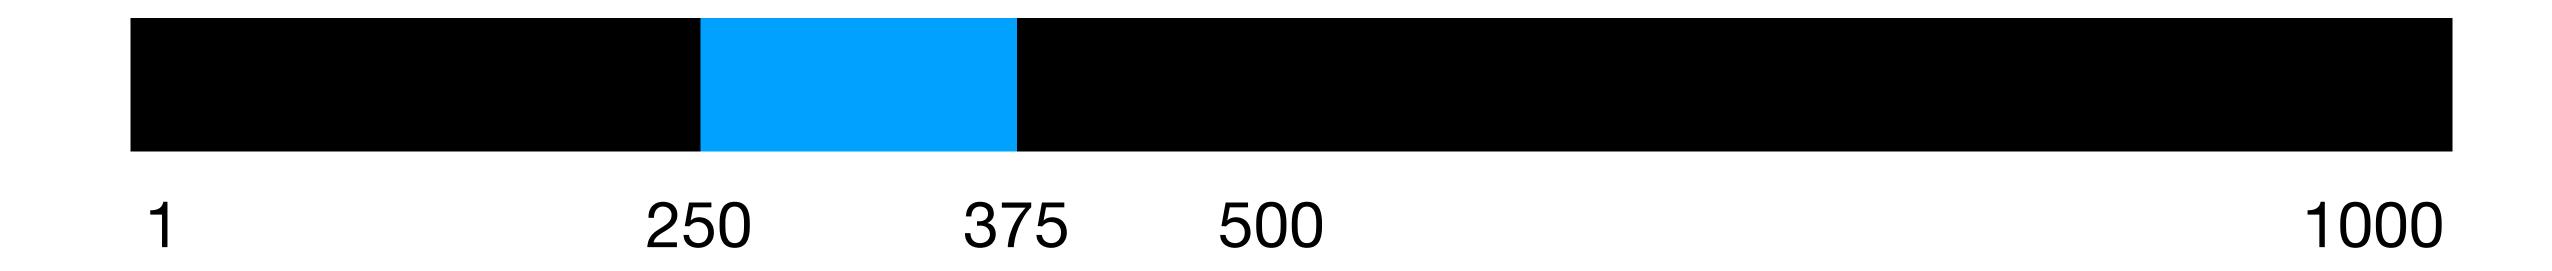

My number: 277 Formula for midpoint?

...with each question; this strategy is called "binary search algorithm"

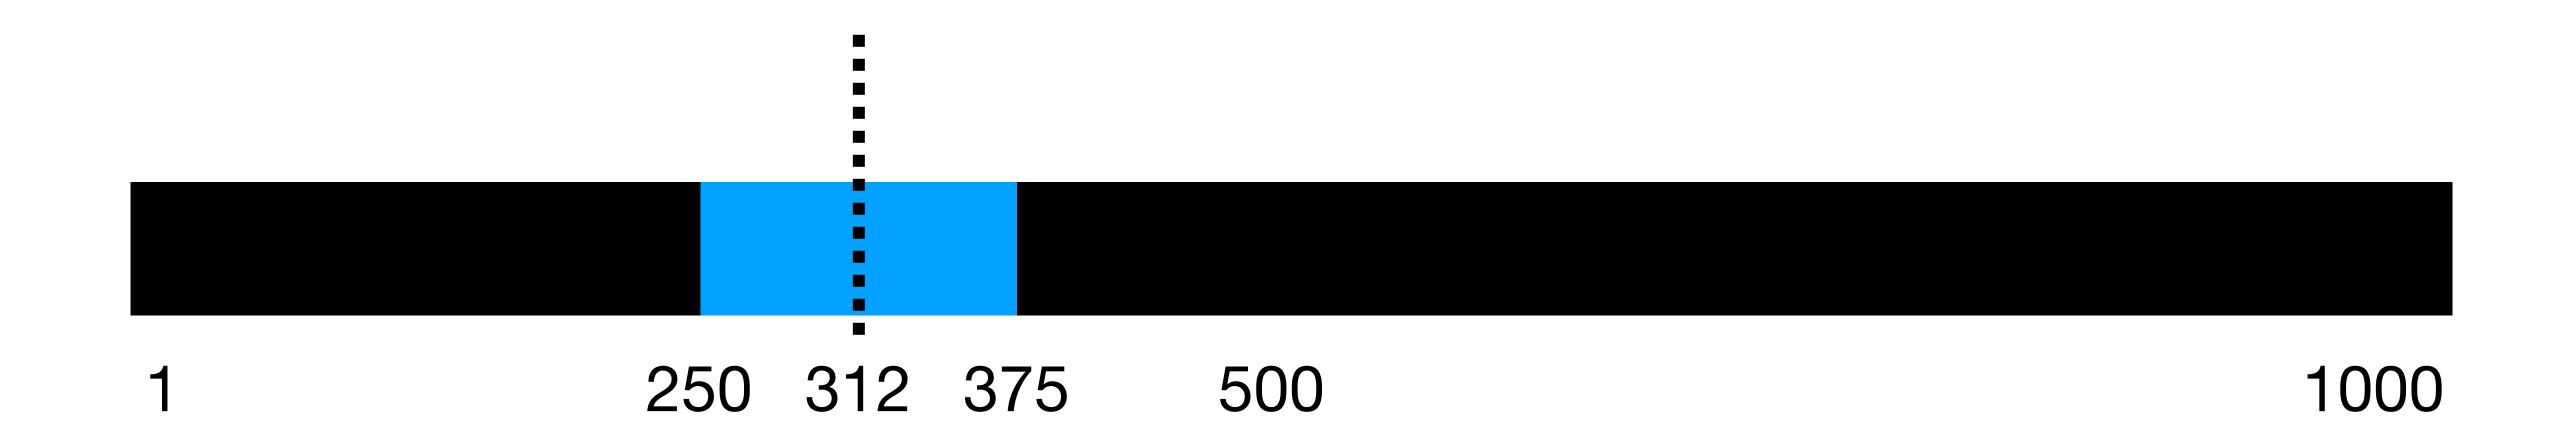

My number: 277 Formula for midpoint? (higher_limit + lower_limit) / 2

...with each question; this strategy is called "binary search algorithm"

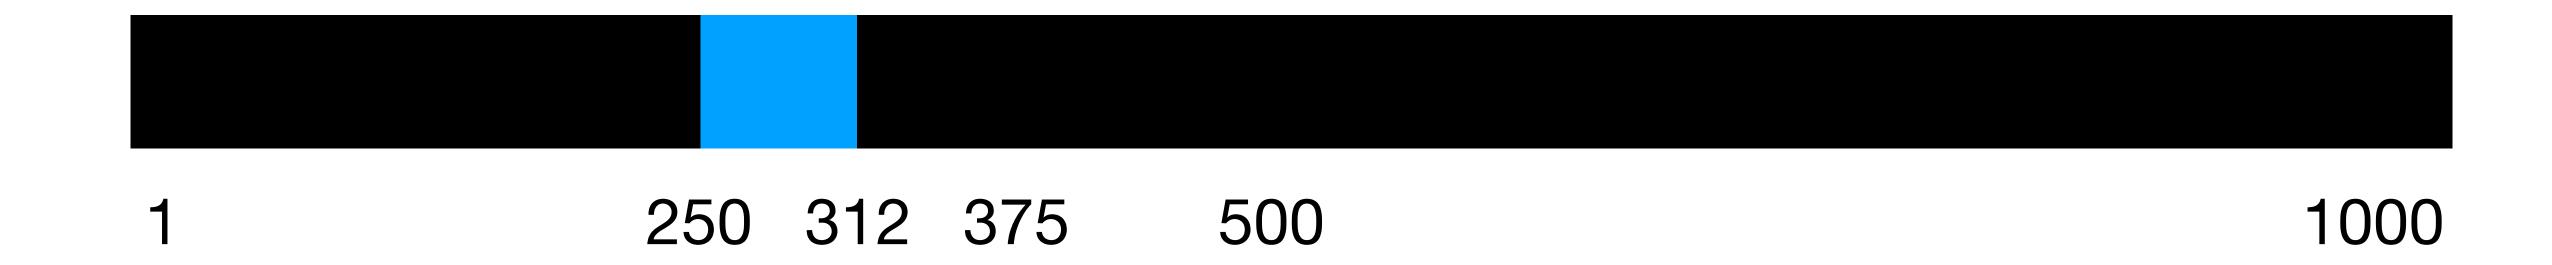

It's lower than 375

...with each question; this strategy is called "binary search algorithm"

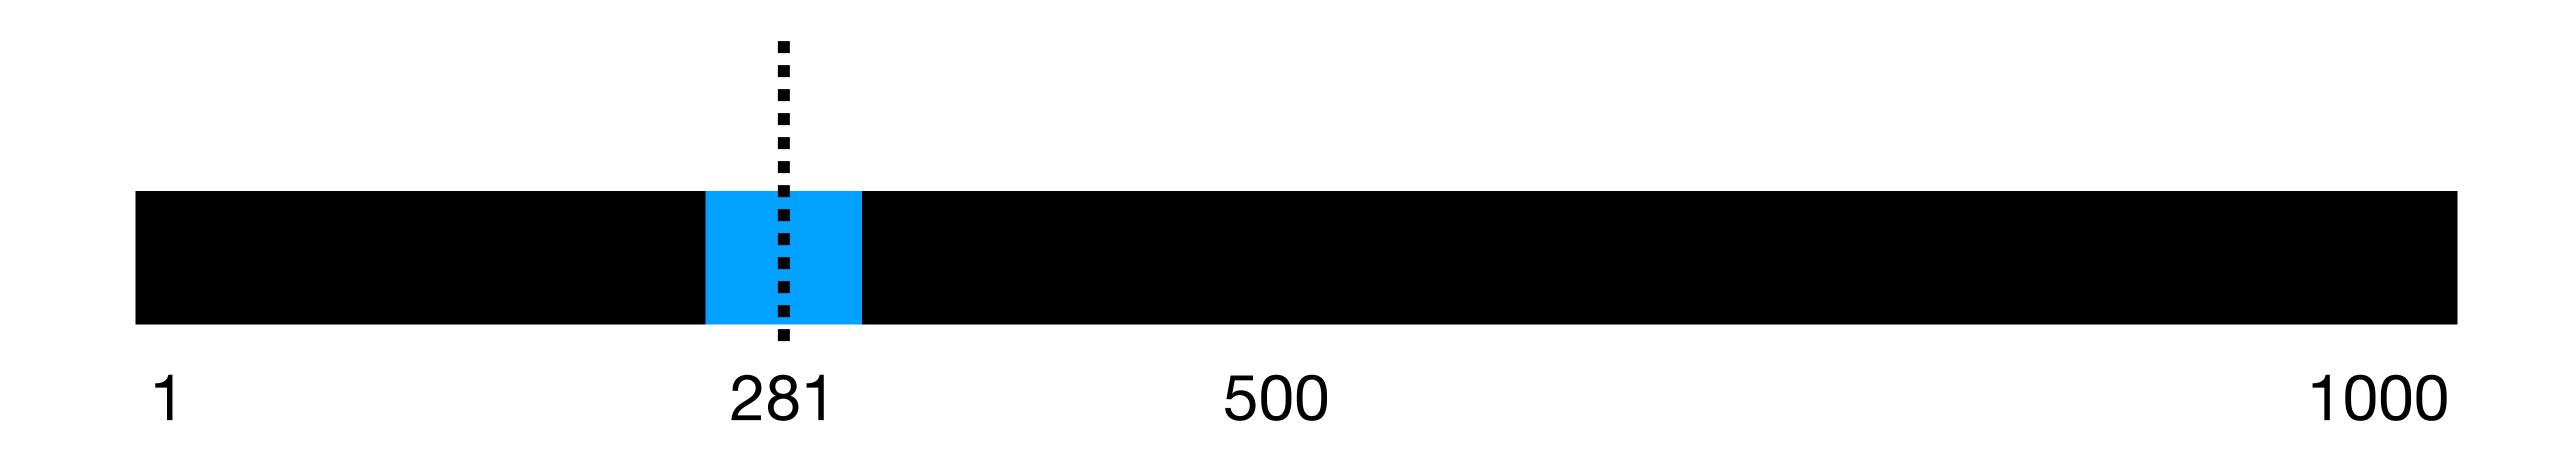

...with each question; this strategy is called "binary search algorithm"

It's lower than 312

...with each question; this strategy is called "binary search algorithm"

It's lower than 281

...with each question; this strategy is called "binary search algorithm"

...with each question; this strategy is called "binary search algorithm"

```
[(base) anvy@mac622265 lecture09 % python guessing_game.py
Think of a number between 1 and 1000!
Is the number 500; lower; or higher? (Y/L/H) l
Is the number 250; lower; or higher? (Y/L/H) h
Is the number 375; lower; or higher? (Y/L/H) 1
Is the number 312; lower; or higher? (Y/L/H) l
Is the number 281; lower; or higher? (Y/L/H) l
Is the number 265; lower; or higher? (Y/L/H) h
Is the number 273; lower; or higher? (Y/L/H) h
Is the number 277; lower; or higher? (Y/L/H) y
Game over. I found the number in 8 questions!
